

Juancarlos Alguera

Homestead, FL | Juancarlosalguera@yahoo.com | (786) 610-9494

PROFESSIONAL SUMMARY

Backend-focused Computer Science graduate student with a B.S. from Florida State University and hands-on experience building API-driven systems, database-backed services, and containerized applications. Proficient in Python, Flask, PostgreSQL, and Docker, with additional experience in CI/CD pipelines and full-stack development.

EDUCATION

Florida International University

M.S. in Computer Science.

Miami, FL

May 2028

Florida State University

B.S. in Computer Science. GPA: 3.35.

Tallahassee, FL

May 2025

EXPERIENCE

Waymo Field Technician

March 2026 – Present

TaskUs

Miami, FL

- Respond to roadside incidents involving autonomous vehicles, diagnosing operational issues and coordinating safe vehicle recovery.
- Troubleshoot vehicle, software, and connectivity issues using diagnostic tools, system information, and established technical procedures.
- Translate field observations into actionable technical information for cross-functional teams to support troubleshooting and resolution.

Website Quality Rater

May 2024 – February 2026

Welocalize

Remote

- Evaluated and rated website content quality across diverse platforms, ensuring adherence to client-specific guidelines and industry best practices.
- Analyzed website functionality, user experience, and search relevance to assess overall site performance.

PROJECTS

AI-Powered Code Review Assistant

- Designed a Flask backend with GitHub webhook and REST API integration to trigger automated code reviews on every pull request and post results back as inline comments.
- Built a PostgreSQL-backed history log tracking flagged issues across repositories, validated against a batch of real pull requests to measure detection accuracy.
- Integrated the Anthropic API to generate structured, line-level feedback on bugs, style violations, and security issues across GitHub pull requests.
- Containerized the application with Docker and configured a CI/CD pipeline using GitHub Actions to run automated tests on every commit before deployment.
- Built a React dashboard to visualize review trends and issue frequency over time.

Database Management System

<https://github.com/IskaIV/Secure-Document-Management-System>

- Developed a secure document management system with role-based access control (RBAC), defining permissions across 3 roles (admin, manager, user) through authenticated access workflows.
- Enforced predefined access policies to enable secure document sharing among authorized users, validated against a sample of 10 users to confirm correctness of access controls.
- Implemented real-time collaboration functionality to support concurrent document editing while maintaining data consistency and preventing conflicts.
- Built with Flask and Python on the back end and SQLite3 for structured data storage and retrieval, with an HTML/CSS front end.

SKILLS

Languages & Frameworks: Python, SQL, C++, C, Java, JavaScript, PHP, HTML, CSS, Flask, NodeJS, ReactJS

Databases & Tools: PostgreSQL, MySQL, SQLite3, Docker, Git, GitHub Actions, Linux/Unix, Oracle VM VirtualBox, LaTeX, MS Office
